18A ANNOUNCEMENTS

Cover image: The figure on the cover (from Margaretten et al page 1045) is a biopsy sample that shows a diffuse infiltrate of monocytoïd cells, with immature myelocyte forms, occasional mature neutrophils, and slight papillary dermal edema without vasculitis. CD68 immunoperoxidase stain labels the majority of cells within the infiltrate, indicating monocyte/macrophage lineage and supports the diagnosis of Sweet's syndrome (original magnification $\times 100$).
