**Cover image:** The figure on the cover (from Kop et al, page 448) shows an immunohistologic image of binding of recombinant EMR2-coated immunofluorescent beads to synovial tissue. EMR2 is a member of the EGF-TM7 family of adhesion class 7-span transmembrane receptors. Delineation of the expression of ligand binding of EMR2 could help elucidate its role in the interaction and activation of macrophages in synovitis. Green represents EMR2, while blue represents DAPI staining of the cell nuclei.
