Cover image: The cover shows the age- and sex-adjusted annual incidence of juvenile rheumatoid arthritis (as classified using the original American College of Rheumatology criteria to allow comparison over the full time period of evaluation [1960–2013]), in Olmsted County, Minnesota. This issue of Arthritis & Rheumatology features a report on the annual incidence of juvenile arthritis (classified initially as juvenile rheumatoid arthritis and subsequently as juvenile idiopathic arthritis) over an extended period of time in this Minnesota population (pages 247–254). As seen in the graph on the cover, the rate of incidence of this disorder has exhibited a consistent cyclic pattern.
