Reply <i>Iris Navarro-Millán and Mary K. Crow</i>	549

Cover image: The figure on the cover (from Adeeb et al, page 490–497) shows immunofluorescence staining of RelA^{-/-} mouse embryonic fibroblasts transfected to express wild-type human RELA (top) or truncated RELAp.His487ThrfsTer7 (bottom). Truncation of the C-terminus did not alter RELA nuclear translocation in response to tumor necrosis factor (right). A novel RELA/p65 frameshift mutation resulting in this truncated RELA protein, which lacks a full transactivation domain, was identified in a family with Behçet's disease.
