**Cover image:** The figure on the cover (from Berntsen et al, pages 837–848) shows the muscle fiber composition (types I and II muscle fibers) and relative size of the muscle fibers in 7 patients with active juvenile dermatomyositis (left) and 5 patients with inactive juvenile dermatomyositis (right) after a combined mean disease duration of almost 26 years. Type I muscle fibers are depicted in blue, and type II muscle fibers are depicted in brown.
