Cover image: The figure on the cover (from Safiri et al, pages 1916–1927) shows age-standardized prevalence estimates of gout per 100,000 population in 2017, by country. The burden of gout was generally highest in developed regions and countries. New Zealand, Australia, and the United States were the three countries with the highest age-standardized point prevalence estimates of gout in 2017.
