**Cover image:** The figure on the cover (from Chakrabarti et al, pages 1749–1758) shows that an adeno-associated virus (AAV-PHP.S) (magenta, top right) can label knee-innervating sensory neurons to a similar extent as the well-characterized retrograde tracer dye fast blue (blue, top left). A subset of sensory neurons labeled with AAV-PHP.S coexpress the nociceptive marker transient receptor potential vanilloid channel 1 (TRPV1) (yellow, bottom left). Overlap of AAV-PHP.S, fast blue, and TRPV1 labeling is seen at the bottom right. This viral labeling strategy is a promising tool to target and control pain-sensing nerves in arthritis.
