

Post-Meeting Takeaways

Key Takeaways from the 2019 ACR/ARP Annual Meeting

The 2019 ACR/ARP Annual Meeting was a great success! After four full days of educational sessions, your fellow participants have identified the following major takeaways:

- Latest therapeutic strategies in rheumatology
- Updated diagnosis and management guidelines
- New/upcoming treatment guidelines for gout, OA, and vasculitis
- Updates on novel therapies and emerging treatments in lupus, RA, and psoriatic arthritis

You don't need to wait until next fall to expand your understanding of the field's latest advances. Take advantage of these learning opportunities:

- **ACR Beyond On-Demand**—Enjoy complimentary access to all recorded #ACR19 sessions
- **#ACR19 Extras**—Browse a variety of bonus educational content when you login to your ACR Beyond On-Demand account:
 - ❑ **ACR Spotlight Slide Decks**—Key abstracts summarized by the authors
 - ❑ **Education Partner Program**—[Meeting highlights](#), including interactive activities and interviews with speakers, brought to you by approved education partners
 - ❑ **E-Posters**—Over 120 E-Posters featuring pediatric, patient perspectives, and late-breaking abstracts
- **Additional MOC points**—Claim up to 12 MOC points for attending the 2019 CARE: MOC Sessions and completing the supplementary online activities [4 MOC points per activity]. Register for the online activities in the Online Courses section of the [Learning Center](#) [no additional fee required].
- **Daily News**—Read the official Annual Meeting publication for news and highlights

Save the date for the 2020 meeting, to be held November 6-11 in Washington, D.C., and connect with your colleagues for an unmatched educational experience featuring exceptional sessions from leading rheumatology experts.

“The program and activities ensured that I had access to vital resources designed to advance my knowledge, skills, and competence. It was educational, and interactive which gave me an overall feeling of great accomplishment.”

“I learned multiple new diagnostic tools that are novel and far-reaching in terms of their applicability. I'll utilize these new knowledge points in my clinical practice and clinical research activities on a daily basis.”

“I learned the impact of health-care disparities on various rheumatic conditions and have come up with ideas on how to overcome them in my practice. Learned about new proposed guidelines on management of osteoarthritis and look forward to incorporating these in my practice”

“This ACR meeting was the most enriching I have been to, as the science seems to be progressing at an ever accelerating rate, and new therapies are arriving. But what most surprised me is the subsets of illnesses described, that I had not learned sufficiently well to this point: subsets of Interstitial lung disease. Details of metabolic bone disease. I have been reviewing courses since returning home, trying to lock in the impressive amount of new information, either new, or not well learned by me, in the past.”
