### Additional Syntax Guide for OVID Embase

| .tw. = Words from title, abstract, and drug trade names |  |

### Syntax Guide for Cochrane (Wiley)

| MeSH descriptor = Medical Subject Heading | ti,ab,kw = Word appears in title, abstract or keyword field of record; word variations are searched in title, abstract, keyword search |
| near/2 = Terms must be within two words of each other, e.g. psoria* near/2 axial SpA | Next = terms must be adjacent, e.g. nonsteroidal next anti-inflammatory* means that the term nonsteroidal must be adjacent to the term anti-inflammatory* |
| * = truncation symbol |  |

### Boolean Operators

| OR = retrieves results that include at least one of the search terms | AND = retrieves results that include all the search terms |
| NOT = excludes the retrieval of terms from the search |  |
