1990 CLASSIFICATION TREE FOR HENOCH-SCHÖNLEIN PURPURA

**HSP subsets**

7. Palpable purpura; age at disease onset ≤20
6. Palpable purpura; age at disease onset >20; biopsy showing granulocytes around small blood vessels
4. No palpable purpura; age <20 at disease onset; biopsy showing granulocytes around small blood vessels
3. No palpable purpura; age ≤20 at disease onset; negative biopsy, but GI bleeding

**Non-HSP subsets**

1. No palpable purpura; age >20 at disease onset
2. No palpable purpura; age ≤20 at disease onset; biopsy negative for granulocytes around small blood vessels; no GI bleeding
5. Palpable purpura; age >20 at disease onset; negative biopsy

* The subset numbers also appear below the subset boxes in Figure 1. The classification tree yields a sensitivity of 89.4% and a specificity of 88.1%. See Table 3 for definitions of criteria. GI = gastrointestinal.
